Hook analysis

"This right here is one of the biggest innovations in oral care in the past hundred years and could be the first step to solving oral disease forever."

9/10
HOOK SCORE

TYPE
Promise

WHY IT WORKS
This hook works exceptionally well by making a bold, ambitious claim that immediately captures attention. It creates a strong curiosity gap by promising a revolutionary solution to a universal health concern (oral disease) while holding the product physically, which adds credibility and visual interest.

SUMMARY
A dentist introduces Zero Pro toothpaste featuring nanolipid technology called BioFuse that selectively targets harmful oral bacteria (strep mutans and P. gingivalis) without harming good bacteria. He explains the science behind oral disease, why previous solutions failed, and presents personal testing results showing 99% reduction in harmful bacteria.

Content themes

Scientific education | Product launch | Health innovation | Founder credibility | Oral microbiome

Strengths & improvements

WHAT WORKS

- Bold opening claim that establishes stakes immediately
- Educational framework that builds credibility and context
- Personal credibility as a dentist explaining complex science
- Clear problem-solution narrative structure
- Data-driven evidence (99% reduction, 80-person study)
- Personal testimonial with before/after results
- Addresses previous failed solutions to position product as superior

COULD IMPROVE

- Hook could be strengthened with visual demonstration or before/after image immediately
- Scientific explanation is quite dense and may lose some viewers midway
- Could benefit from breaking into a series for better retention and engagement
- Missing specific pricing or availability information in CTA
- No clear link or purchase path mentioned in verbal CTA
- Could use more visual aids or graphics to illustrate bacteria concept
- Ending feels slightly rushed after detailed middle section

- Family benefit angle creates emotional connection
- Strong product differentiation with proprietary technology

CALL TO ACTION

Get zero pro by something nice. It's the best toothpaste in the world, and I promise you, once you try it, you'll never want another one again.

Key frames

0:00 - 0:03

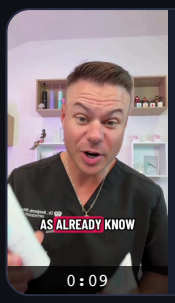
This right here is one of the biggest innovations in oral care in the past hundred years

0:03 - 0:06

is one of the biggest innovations in oral care in the past hundred years and could be the first step to solving oral disease forever.

0:06 - 0:09

and could be the first step to solving oral disease forever. Let's talk about it. As already know and love our 10% hydroxyapatite

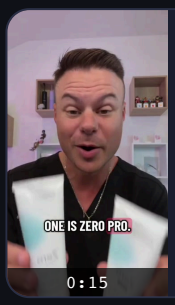


0:09 - 0:12

As already know and love our 10% hydroxyapatite toothpaste called zero.

0:12 - 0:15

called zero. But our new one is zero pro.



0:15 - 0:18

But our new one is zero pro. And there's some really important stuff that changes everything in oral care,

0:18 - 0:21

And there's some really important stuff that changes everything in oral care, oral disease and even dentistry in general.

0:21 - 0:24

oral disease and even dentistry in general. But to understand why zero pro is such a big deal,

0:24 - 0:27

But to understand why zero pro is such a big deal, we need to do a science lesson first. You see, a lot of people think that cavities are caused because of sugar.

0:27 - 0:30

You see, a lot of people think that cavities are caused because of sugar. That's not actually the case.

0:30 - 0:33

That's not actually the case. In fact, most of your oral disease comes from bacteria that live in your mouth.

0:33 - 0:36

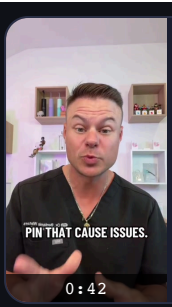
In fact, most of your oral disease comes from bacteria that live in your mouth. And you have good and bad bacteria.

0:36 - 0:39

And you have good and bad bacteria. This is called your oral microbiome. And we know that there are two major king pin that cause issues.

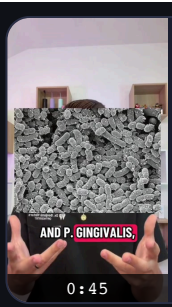
0:39 - 0:42

And we know that there are two major king pin that cause issues.



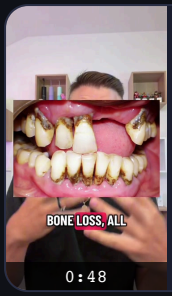
0:42 - 0:45

And we know that there are two major king pin that cause issues. We have strep mutans, which causes cavities, and P. Gingivalis,



0:45 - 0:48

and P. Gingivalis, which is the number one cause of gum disease, bone loss, all that type of stuff.



0:48 - 0:51

bone loss, all that type of stuff. Holy grail of oral care is figuring out how do we kill these bad bacteria

0:51 - 0:54

Holy grail of oral care is figuring out how do we kill these bad bacteria without harming the good bacteria.

0:54 - 0:57

without harming the good bacteria. And we've tried a lot of different things. Fact, this is why we tell you not to use alcohol mouthwashes.

0:57 - 1:00

Fact, this is why we tell you not to use alcohol mouthwashes. Because they were the first attempt at this.

1:00 - 1:03

Because they were the first attempt at this. They said, let's kill 99.9% of germs.

1:03 - 1:06

They said, let's kill 99.9% of germs. And they did. The problem is they didn't realise we had all these good bacteria

1:06 - 1:09

they didn't realise we had all these good bacteria and then only the bad bacteria. Grew back when you stopped using it.

1:09 - 1:12

Grew back when you stopped using it. This is why we tell you don't use alcohol mouthwashes. From there, people tried prebiotics

1:12 - 1:15

From there, people tried prebiotics and postbiotics, and maybe we can add some bacteria's in and we can take some stuff away,

1:15 - 1:18

and maybe we can add some bacteria's in and we can take some stuff away, but that didn't really work either. That is, until now.

1:18 - 1:21

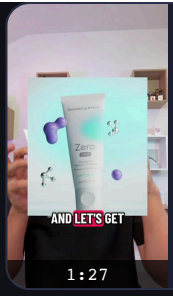
That is, until now. Because I've been working with a biotech company for the past two years

1:21 - 1:24

Because I've been working with a biotech company for the past two years to develop a nanolipid technology

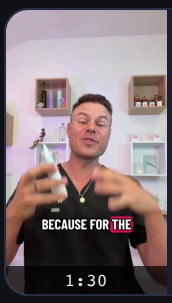
1:24 - 1:27

to develop a nanolipid technology called biofuse. And let's get into exactly why this is so important.



1:27 - 1:30

And let's get into exactly why this is so important. Because for the first time in oral care history,



1:30 - 1:33

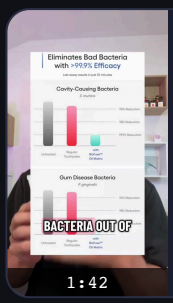
Because for the first time in oral care history, we can directly target the exact bacteria that we want to get rid of.

1:33 - 1:36

we can directly target the exact bacteria that we want to get rid of.

1:36 - 1:42

we can directly target the exact bacteria that we want to get rid of. And so we targeted P. Gingivalis and strept mutans,

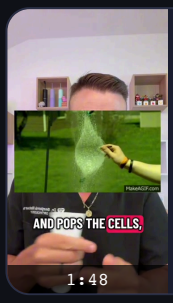


1:42 - 1:45

and we show that we can actually reduce that bacteria out of your mouth by selectively targeting it and almost popping it like a water balloon.

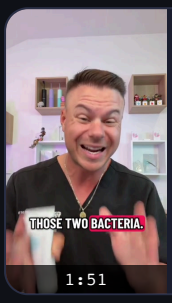
1:45 - 1:48

and almost popping it like a water balloon. It goes in and pops the cells,



1:48 - 1:51

It goes in and pops the cells, targets it, and it just completely destroys those two bacteria.



1:51 - 1:54

those two bacteria. Specifically done in lab testing. We even done an 80 person study out of the university of Utah on humans.

1:54 - 1:57

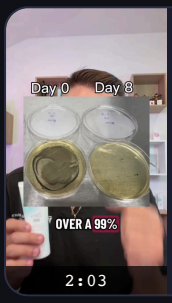
We even done an 80 person study out of the university of Utah on humans. But myself, I actually used it for 21 days.

1:57 - 2:00

But myself, I actually used it for 21 days. We swapped before and after,

2:00 - 2:03

We swapped before and after, and here are the results in the pictures. I actually had over a 99% reduction in my strep mutans and p. Gingivalis



2:03 - 2:06

I actually had over a 99% reduction in my strep mutans and p. Gingivalis

2:06 - 2:09

I actually had over a 99% reduction in my strep mutans and p. Gingivalis using my Zero Pro. Not only does this mean that you reduce your chances of getting cavities

2:09 - 2:12

Not only does this mean that you reduce your chances of getting cavities and oral disease by a ton,

2:12 - 2:15

and oral disease by a ton, it also means that you won't have those bacteria levels in your mouth anymore.

2:15 - 2:18

it also means that you won't have those bacteria levels in your mouth anymore. So when You go pass them on to your kids by drinking after them,

2:18 - 2:21

So when You go pass them on to your kids by drinking after them, kissing them or whatever. They will also get the benefit of not having those bad bacteria loads.

2:21 - 2:24

They will also get the benefit of not having those bad bacteria loads.

2:24 - 2:27

They will also get the benefit of not having those bad bacteria loads. And we're finally attacking the cause of oral disease directly.

2:27 - 2:30

And we're finally attacking the cause of oral disease directly. This could greatly, finally reduce oral disease massively in the population

2:30 - 2:33

This could greatly, finally reduce oral disease massively in the population for people who use this product.

2:33 - 2:36

for people who use this product. So if you want the future of oral care

2:36 - 2:39

So if you want the future of oral care and you want what's best for your mouth and your family's mouths,

2:39 - 2:42

and you want what's best for your mouth and your family's mouths, get zero pro by something nice. It's the best toothpaste in the world,

2:42 - 2:45

It's the best toothpaste in the world, and I promise you, once you try it, you'll never want another one again, because, well,

2:45 - 2:48

you'll never want another one again, because, well, no other toothpaste can do what ours does.

2:48 - 2:51

no other toothpaste can do what ours does. Thank you, guys. I appreciate you. And we will keep these

2:51 - 2:54

I appreciate you. And we will keep these innovations coming because we will be the best oral care company in the world. Here's to you guys.

2:54+

because we will be the best oral care company in the world. Here's to you guys.

0:00 This right here
0:00 is one of the biggest innovations in oral care in the past hundred years
0:04 and could be the first step to solving oral disease forever.
0:07 Let's talk about it.
0:08 As already know and love our 10% hydroxyapatite
0:11 toothpaste
0:11 called zero.
0:12 But our new one is zero pro.
0:15 And there's some really important stuff that changes everything in oral care,
0:19 oral disease and even dentistry in general.
0:22 But to understand why zero pro is such a big deal,
0:24 we need to do a science lesson first.
0:25 You see, a lot of people think that cavities are caused because of sugar.
0:28 That's not actually the case.
0:30 In fact, most of your oral disease comes from bacteria that live in your mouth.
0:34 And you have good and bad bacteria.
0:36 This is called your oral microbiome.
0:38 And we know that there are two major king pin that cause issues.
0:42 We have strep mutans,
0:43 which causes cavities,
0:44 and P. Gingivalis,
0:45 which is the number one cause of gum disease,
0:47 bone loss, all that type of stuff.
0:49 Holy grail of oral care is figuring out how do we kill these bad bacteria
0:52 without harming the good bacteria.
0:55 And we've tried a lot of different things.
0:56 Fact, this is why we tell you not to use alcohol mouthwashes.
0:59 Because they were the first attempt at this.
1:00 They said, let's kill 99.9% of germs.
1:03 And they did. The problem is
1:04 they didn't realise we had all these good bacteria
1:06 and then only the bad bacteria.
1:08 Grew back when you stopped using it.
1:09 This is why we tell you don't use alcohol mouthwashes.
1:11 From there, people tried prebiotics
1:13 and postbiotics,
1:13 and maybe we can add some bacteria's in and we can take some stuff away,
1:16 but that didn't really work either.
1:17 That is, until now.

1:19 Because I've been working with a biotech company for the past two years

1:22 to develop a nanolipid technology

1:25 called biofuse.

1:26 And let's get into exactly why this is so important.

1:29 Because for the first time in oral care history,

1:31 we can directly target the exact bacteria that we want to get rid of.

1:36 And so we targeted P. Gingivalis and strept mutans,

1:39 and we show that we can actually reduce that bacteria out of your mouth

1:43 by selectively targeting it

1:44 and almost popping it like a water balloon.

1:46 It goes in and pops the cells,

1:48 targets it, and it just completely destroys

1:50 those two bacteria.

1:51 Specifically done in lab testing.

1:53 We even done an 80 person study out of the university of Utah on humans.

1:56 But myself, I actually used it for 21 days.

1:58 We swapped before and after,

2:00 and here are the results in the pictures.

2:01 I actually had over a 99% reduction in my strep mutans and p. Gingivalis

2:06 using my Zero Pro.

2:08 Not only does this mean that you reduce your chances of getting cavities

2:10 and oral disease by a ton,

2:12 it also means that you won't have those bacteria levels in your mouth anymore.

2:15 So when You go pass them on to your kids by drinking after them,

2:18 kissing them or whatever.

2:20 They will also get the benefit of not having those bad bacteria loads.

2:24 And we're finally attacking the cause of oral disease directly.

2:28 This could greatly, finally reduce oral disease massively in the population

2:32 for people who use this product.

2:34 So if you want the future of oral care

2:36 and you want what's best for your mouth and your family's mouths,

2:39 get zero pro by something nice.

2:41 It's the best toothpaste in the world,

2:42 and I promise you, once you try it,

2:43 you'll never want another one again, because, well,

2:45 no other toothpaste can do what ours does.

2:49 Thank you, guys.

2:49 I appreciate you. And we will keep these

2:51 innovations coming

2:52 because we will be the best oral care company in the world. Here's to you guys.
